

## Exercise 0: Programming Distributed Systems (SS 2020)

### Information

- We use embedded videos from the Panopto video platform. If you can't see the videos (or can't log in through the embedded page), please visit <https://vcm.uni-kl.de> and log in manually first with your RHRK account.
- You will receive the fastest answers if you post your questions in our Mattermost chat.
- Please help out other students in the chat if you know how to answer the question - collaboration is encouraged, but do not ask how to solve an exercise or post full solutions to exercises.

## 1 About You

Record a short video or write a short text to tell us a bit about yourself, your interests, and why you want to take this course.

Post it to the *Introduction* Mattermost channel.

## 2 Find a Team Partner

Use the *Introduction* channel to find a team partner for submitting the exercises.<sup>1</sup>

Once you found a team partner, please send an email to Albert Schimpf with your team name and team members. You will then receive a Gitlab repository where you will submit your solutions to the upcoming exercises.

---

<sup>1</sup>If you prefer, you can submit the exercises as a one-person-team, but this will increase your workload and deprive you of valuable team feedback.
